

ACTIVITIES

AMONG THE SERVICES OFFERED:

- ▣ Noise and Vibration Testing
- ▣ Internal and external noise testing for light aircraft and general aviation
- ▣ Vibration testing of aerospace structures and components
- ▣ Certification according to CS36 and FAR36 requirements
- ▣ Noise and Vibration Testing in Civil Applications
- ▣ Acoustic impact assessment of infrastructure and work activities
- ▣ Noise and vibration reduction in inhabited environments
- ▣ Stress Analysis and CAD Design
- ▣ Reverse Engineering
- ▣ Design of aerospace components and systems
- ▣ Design and Vibration Testing of a Facility for CubeSat Vibration Tests
- ▣ Dynamic Characterization of Sound-Absorbing Materials
- ▣ 3D Printing and Prototyping

Dream Srl has been certified by **DULV** for conducting external noise tests on light aircraft up to 600 kg. Dream Srl holds ISO 9001 certification, reflecting its commitment to high quality standards and continuous improvement.

IF YOU CAN DREAM IT,
YOU CAN DO IT!

COMPANY
PROFILE

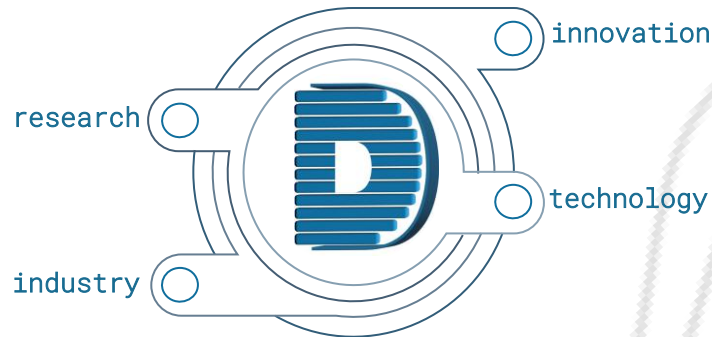

DesignResearchEngineeringAerospaceModeling

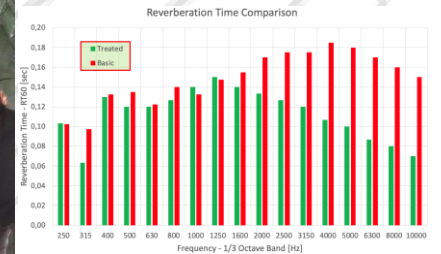

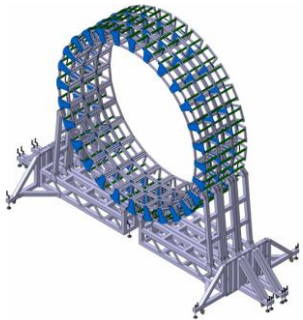

ABOUT US

Dream Srl, founded in 2015, builds on over 30 years of experience in **aeronautical structures**, with strong academic roots in aviation. The company specializes in aircraft **construction, testing, and certification**, while also focusing on spreading technical

knowledge to aerospace engineers. The curiosity inherent in academic research, always tied to real-world problems, makes Dream Srl an active participant in **research programs** focused on developments and integrations within the sector.

Dream is constantly seeking new collaboration and development opportunities and is open to partnering with companies and institutions to develop new projects and technologies. The company is currently involved in regional, national, and European research projects to develop new technologies and ideas in the aeronautical field, focusing not only on noise and vibration issues. A young company, Dream consists of a team of expert and qualified aerospace engineers who are always on the lookout for new opportunities and are strongly committed to research and development.

Dream's research activities build on more than three decades of work by researchers, professors, and students in **structural dynamics, aeroelasticity, vibroacoustics, and community noise**. Dream Srl is an ISO-certified aerospace

micro-enterprise with several short- and long-term programs, some self-funded and others developed with larger companies. It also aims to obtain regular accreditation for accelerometer calibration and APDOA privileges for minor changes and small repairs
